

Aidan Reaves

970-576-6265 | areaves@mines.edu | aidanreaves.com | linkedin.com/in/aidan-reaves | github.com/areaves1207

Innovative **Associate Software Engineer** with a passion for full-stack development and staying on top of technology trends. Experienced across the Software Development Lifecycle — designing, developing, testing, and implementing cloud-based technical solutions with React, Node.js, TypeScript, Python, AWS, Docker, and AI/ML tools. Collaborative, disciplined, and resilient; strong written and verbal communication skills with a track record of assisting cross-functional teams and product managers to deliver customer-facing applications.

EDUCATION

Colorado School of Mines <i>Master of Science in Computer Science, Information Systems</i>	Golden, CO May 2025
Colorado School of Mines <i>Bachelor of Science in Computer Science</i>	Golden, CO May 2024

WORK EXPERIENCE

Associate Software Engineer / Technical Operations Lead <i>First Class Motors of Greeley, LLC</i>	June 2024 – Present Greeley, CO
– Developed and implemented technical solutions using innovative technology to improve quality, delivery efficiency, and customer-facing experience for business partners, increasing inbound leads by 50% – Provided workday and after-hours production support including troubleshooting, problem correction, and promotion to the production environment; engaged vendors as necessary to resolve infrastructure issues – Collaborated with program owner and business units regarding enhancements, gathering technical specifications and implementing new technologies to support employee and customer needs	
Software Engineering Intern <i>Pie Insurance</i>	June 2023 – Aug. 2023 Denver, CO
– Designed and implemented a Python-based validation service using development tools to detect schema violations prior to ingestion, improving security and data reliability across production environment pipelines – Collaborated across Agile teams with cross-functional teams and product managers in Agile ceremonies; gained experience with version control using Git including branching strategies, pull request reviews, and code reviews	

PROJECT EXPERIENCE

LotManager <i>TypeScript, React 18, Node.js, Express, PostgreSQL, Docker, GitHub Actions, JWT</i>	Jan. 2026 – Present
– Designed, developed, tested, and implemented a full-stack dealership CRM — a cloud-based solution using React 18, TypeScript, Node.js/Express, and PostgreSQL for multi-tenant vehicle inventory, customer management, and sales workflows – Engineered a layered REST API across 40+ endpoints; implemented security best practices including JWT auth, bcrypt hashing, and Zod schema validation at all front-end and back-end API boundaries – Built GitHub Actions CI/CD pipelines and development tools enforcing 70% test coverage; containerized services with Docker and integrated structured logging and health-check monitoring for troubleshooting and root cause analysis – Implemented AI-powered document automation and intelligent search using fuzzy matching, enabling customer-facing automation of compliance forms and improving employee workday efficiency	
DreamVault <i>TypeScript, React, Node.js, AWS (EB, S3, CloudFront, RDS), MySQL, Docker</i>	Oct. 2025 – Jan. 2026
– Architected and deployed a full-stack SaaS application on AWS cloud platforms (Amazon Elastic Beanstalk, S3/CloudFront CDN, RDS) and Microsoft Azure-compatible infrastructure, demonstrating knowledge of multiple cloud services – Implemented security best practices including AES-256-GCM encryption, HMAC-based searchable encryption for document automation, JWT stateless auth, bcrypt password hashing, and email verification	
Paint By Numbers Generator <i>Python, FastAPI, React, OpenCV, NumPy, Scikit-learn, TensorFlow</i>	Aug. 2025 – Oct. 2025
– Designed and implemented a full-stack application experimenting with and learning new technologies — applying Scikit-learn and TensorFlow AI/ML techniques for color quantization, automated feature extraction, and image segmentation – Analyzed technical specifications and implemented algorithmic optimizations improving end-to-end processing performance by 80%+, eliminating redundant operations and tuning thresholding stages	

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, Python, Java, SQL, HTML, CSS, Windows PowerShell
Full Stack Development: React 18, Node.js, Express, FastAPI, RESTful APIs, front-end and back-end development, Vite, Tailwind CSS
Cloud Platforms: AWS (S3, CloudFront, Elastic Beanstalk, RDS), Microsoft Azure, Google Cloud (GCP), Docker, Kubernetes
Databases: PostgreSQL, MySQL, open source databases, normalized schema design, SQL query optimization
AI / ML: Scikit-learn, TensorFlow, OpenCV, NumPy, chatbots, document automation, intelligent search, automation
Software Development Lifecycle: Agile/Scrum, Git, version control, CI/CD pipelines and development tools, testing, production support, troubleshooting, security best practices, Linux/Ubuntu
